THIS magnificent Lily can be had in full bloom 4 weeks from time of planting in water or soil, and can be kept back for late blooming until May 1. Keep bulbs dry in a cool place until you want to flower them. For Easter, or any gatherings where floral decorations are wanted, nothing is more easy to procure at the proper time than this beautiful plant.

The bulbs I supply are the true large-flowering variety from the Yalu River. They give from five to twelve spikes, which bear clusters of large, perfect, waxy-white blossoms, with a yellow center, and of a powerful and delightful fragrance. They grow well in pots of soil, but the most popular way of blooming them is the Chinese method. Fill a bowl with pebbles, in which place the bulb, setting it about one-half the depth, so that it will be held firmly, then fill with water to the top of the pebbles and place in a warm, sunny window. The bulb will at once commence a rapid growth and bloom in three or five weeks. The bulbs are so large, and have so much vitality, they can be kept perfectly dry all winter and planted a month before flowers are desired.

Price for large bulbs 12c. each 3 for 30c., 6 for 50c.

FREESIA REFRACTA ALBA.

Were I asked to name the best and most popular flower for winter blooming for every and any one to plant, I would say at once Freesia Refracta Alba. Why? Because it is the easiest Bulb to treat and care for we have. The bulbs are so solid and firm that they will live out of soil for months, and when once planted, whether in September or January, they grow at once, and bloom, you might say, without care. They throw up spray after spray of flowers, and will remain in bloom fully one month or six weeks. The sprays, when cut and placed in water, will last fully two weeks, and such a delicate and subtle fragrance I think no other flower has. Plant 3 to 6 in a pot, set in a cool, dark place for a week, then bring to the light and water sparingly at first. For vases or personal wear they have no equal.

New Crimson Rambler—This grand new climbing Rose still increases in popularity as its great merits become better known. A vigorous grower, perfectly hardy, and a tremendous bloomer, bearing immense clusters of most brilliant colored roses in such great profusion that the whole plant appears a sheet of bloom for weeks at a time; the color is intense glowing crimson, remarkably bright and striking, in fact, one of the brightest colored roses ever seen. 15c., 2 for 25c.

The Empress of China is a hardy, perpetual blooming, climbing Rose, and said to have been brought from China; it resembles a tea rose; blooms the first year and all through the season; the color is soft, dark red, passing to light pink or apple blossom; the flowers are medium size and quite fragrant, not entirely double, but of pleasing, graceful form, and borne on long stems, nice for cutting. It is a rapid grower, of slender twining habit, bearing few thorns, and valuable for training over porches, arbors, etc. It is entirely hardy, needs no protection and will thrive in any locality. 15c. each, 2 for 25c.

NEW GERANIUM,

The Double New Life—The sensation which the Single New Life Geranium created when introduced in England is well remembered.

The Double New Life, as may be judged from our very faithful illustration, is a much greater sensational departure in every way. The outer florets are large, of a brilliant red; in the center of these appear another semi-double floret, pure white in color, effecting a charming contrast, difficult to realize unless seen, and having the appearance of being produced artificially.

This very novel geranium was lately sent out in England by subscription at $2.50 each. My price, 15c. each, 2 for 25c., 6 for 50c.
Asparagus Sprengeri. (Emerald Feather.)
This New Abyssinian Parlor Fern is a plant of exquisite grace, and impressive beauty, greatly admired by all people of refined taste, and destined to supersede "The Smilax and the Fern." It is handsomer for vases, bouquets or festooning. The fronds grow 5 feet in length and will last weeks in water when cut, and perfectly fresh for days without anything. An easy and rapid grower—a lovely plant for church decoration at Christmas or Easter. Strong plants 15c. each, 2 for 25c.

THE BOSTON FERN.
(Nephrolepis Exaltata Bostomiensis.)
In the vicinity of Boston no other plant is used so extensively as this graceful Nephrolepis, which differs from the ordinary fern in having much longer fronds, which frequently attain a length of four feet. These fronds arch and droop over very gracefully, on account of which it is frequently called the fountain fern. This drooping habit makes it an excellent plant to grow as a single specimen on a table or pedestal. 15c., 2 for 25c. New.

"THE AUREOLE GERANIUM."—Mad Bruant.
The most remarkable Geranium ever raised for outside bedding or indoor decoration. The flowers are a wonderful piece of art, almost startling in effect. For bedding purposes no variety equals it; the plant is one of the most beautiful for decorative purposes we have either for window, table or church. Each floret resembles a panzy blossom. They are very large, and remind one of a beautiful plaque of alabaster whiteness, veined with lake, radiating into a beautiful aureole of bright solferino—a flower of celestial loveliness. Price 15c. each, 2 for 25c., 10 for $1.00; $7.00 per 100.

NEW WEEPING LANTANA.
The most beautiful basket plant ever grown. Record of one plant.—Planted in an ordinary nail keg in May, was in flower all the time till August, when it had 500 clusters of flowers, continued in full flower (removed to a greenhouse in October) to December, when 350 clusters were counted. At this time every young branch was cut off to propagate, but on January 14th it had 100 beautiful new clusters. The plant has a most graceful drooping habit, grows rapidly, and blooms persistently winter and summer, producing a cluster of flowers at each leaf. Color, most delicate, clear, brilliant, rosy lilac; foliage, bright dark green. Does equally well in winter or summer. 15c. each, 2 for 25c.

"JADOO" Fibre...
A new material in which every Plant thrives without Earth.

A great boon to growers and lovers of flowers, whether plants, cuttings, bulbs or seeds. Success made easy and sure with the finest and most difficult Green House seed, such as Primulas, Cinerarias, Calceolarias, Double Petunias, etc., etc. The most difficult plants and bulbs to grow (which are very often the most beautiful also) will grow, thrive and bloom in "JADOO," with ease and certainty. Bulbs for winter blooming potted in "JADOO" will flower sooner, better and larger, while the material is cleaner, more pleasant and lighter than soil.

1. It is omni-suitable. That is, it suits all kinds of plants. It is well-known that in the old way, as many as thirty different kinds of earth mixtures are required for successfully growing the different kinds of plants. This calls for special knowledge and skill possessed only by professional people, and to them, even, it is a matter of laborious and expensive detail. "JADOO" Fibre does away with all this. If you have a hundred different kinds of plants and vegetables, instead of selecting the different kinds of earth mixtures known to be most suitable, you put them all in "JADOO" Fibre.

2. Transplanted in "JADOO" Fibre plants do not flag. Even those in full bloom can be transplanted with perfect safety and they will continue to bloom.

3. It increases size, brilliancy and intensity of color in flowers.

4. It increases the size and enhances the flavor of fruits and vegetables.

5. Seeds germinate more quickly in "JADOO" Fibre than in earth.

6. Cuttings of all kinds root in half the time.

7. Requires less skill and labor than earth.

8. Favorite plants in a dying condition can be restored to vigorous life and growth in "JADOO" Fibre.

9. "JADOO" Fibre is not a chemical manure.

10. "JADOO" Fibre is cleaner to handle than earth.

11. It always remains sweet and does away with the smell of sour earth in rooms.

12. It is only half as heavy as earth, an item that counts for much in window gardens and hanging baskets.

13. Owing to its spongy nature, it retains moisture twice as long and requires watering only half as often as earth.

The most difficult Seeds come up readily in "JADOO."

"JADOO" Liquid...
Both Meat and Drink to ...Plants...

14. Plants grow more hardy, flowers do not drop off so easily and markings in foliage or in flower are more distinct and brilliant.

15. Plants do not require repotting more than half as often, and pots are two sizes smaller, saving much space. As "JADOO" Fibre only gradually gives off the chemical properties with which it is impregnated it would really take years to exhaust it with most plants.
